DETAILED ACTION

Allowable Subject Matter

Claims 25-27 are allowed.

The following is an examiner's statement of reasons for allowance: The prior cited art of record does not disclose the claimed first and second set of signal paths and selecting the first set of signal paths to configure the delay element and selecting the second set of signal paths to process a telephony signal received from a remote site and a telephony signal being sent to the remote site, as required by independent claim 25. The first set of signal paths which has a reference signal path from a waveform synthesizer to a delay element to a waveform detector is not disclosed nor suggested by Knittle et al. The apparatus of Knittle et al lacks a delay element prior to the waveform detector. Park et al disclose counting samples to determine the echo path delay, however those samples are counted from the beginning of an echo determined by its first attack and when the echo signal is below a predetermined threshold. There is no disclosure of a reference signal path. Newly cited references to Yip, US Patent 5,896,452 and Park, US Patent 5,502,717, also disclose methods for determining the echo path delay. However, Park '717 which is based on counting samples that reach predetermined thresholds, does not disclose a reference signal path to a waveform detector which detects the time between receipt of the waveform generated by the synthesizer via the reference signal path and the receipt of the waveform generated by the local channel signal path (out the speaker, in through the microphone). Yip discloses a switch for switching between a training mode and communication mode, but does not disclose the claimed first set of signal paths. As a result, claim 25 and its dependents, claims 26-27 are allowed.
